

DISCOVER, CATALOG AND SCAN ALL YOUR ENTERPRISE APPLICATIONS

Recent media profiles of attacks targeting organizations highlight the risks that web application vulnerabilities present, making web application security more important than ever for maintaining a comprehensive security and compliance program to protect company data and assets.

Introducing QualysGuard WAS 2.0

Based on Qualys' new and powerful next generation SaaS platform, QualysGuard Web Application Scanning (WAS) 2.0 brings web application security to a new level with an easy-to-use, intuitive service that includes unique capabilities – including accurate discovery and cataloging of web applications, identification of vulnerabilities and remediation paths, helping companies proactively secure their web applications.

WAS Dashboard

QualysGuard WAS Benefits

- Fully automated, leverages the power and scalability of the QualysGuard SaaS platform
- Ability to discover, catalog and manage web applications ensures full coverage
- Intuitive user interface and highly automated processes increases productivity
- Unlimited application scanning delivers the most cost effective solution
- Centralized management ensures organized approach and leverages cooperation

“ Web application security is an important part of maintaining a rigorous, proactive security and compliance program to protect company data and assets. However, it is an increasingly complex problem due to the proliferation of web applications and constant attacks against web applications. To foster a high level of protection for web applications, enterprises need the tools that can accurately discover and catalog their web applications, identify vulnerabilities within those applications and provide remediation information.”

Charles Kolodgy,
Research Vice President for Security Products
IDC

“ At Georgia Tech, it is important for us to build security into everything we do for our IT infrastructure. We use many web applications so it is important that we take measures to keep them secure. Being able to catalog and scan our web applications can help us proactively manage IT security across our web applications.”

Jason C. Belford,
Information Security Manager
Georgia Tech

QualysGuard WAS Features:

Unified Dashboard — Gives users a comprehensive view of scans, results and reports. Users can jump directly to the details of any item as needed.

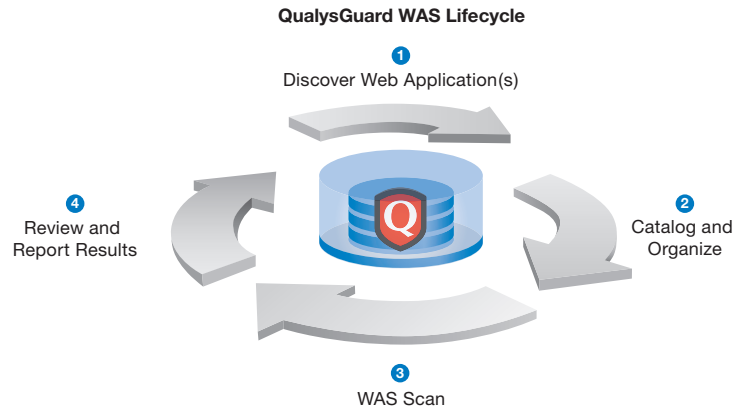

Web Application Discovery and Cataloging — Ensures comprehensive scanning coverage and application management. Discovery identifies web applications in the environment and adds to the catalog to prioritize applications for scanning.

Interactive Reporting — Supports powerful analysis and secure distribution of scan results. Web application, scan and scorecard reports can be created, saved and distributed to stakeholders.

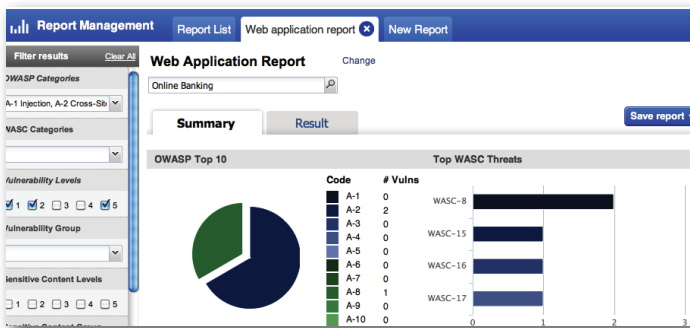

Scanning Options — Option profiles can be created and reused to ensure scan consistency and to target specific testing requirements. Option profiles can configure items such as maximum links to crawl, performance settings, brute force authentication attributes, detection scope and sensitive content settings. Scans can also be configured to authenticate to servers and applications to discover vulnerabilities in protected areas.

Powerful and Accurate Scan Engine — Detects web vulnerabilities such as SQL injection, Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF) and URL redirection with maximum automation. Identification of the most common web application vulnerabilities including the OWASP Top Ten.

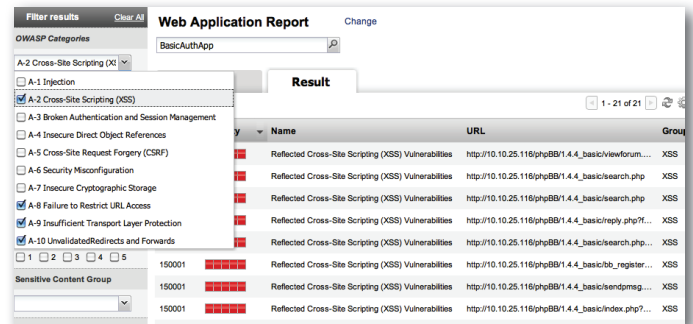

Customizable Asset Tagging Mechanism — Enables user defined hierarchical partitioning of web applications, scan data and reporting. Tagging can be used to limit user access to only those assets that they share a tag with.
